EMPLOYMENT

GrapeCity, Inc.

Full Stack Web Engineer, Feb 2017 – Present

- Designed and built Node.js powered static site generator based on Metalsmith platform
- Worked with back-end engineering team to implement user authentication and account management powered by MongoDB and Express.js
- Developed content search and account management applications using React and related technologies (CSS-in-JS, Flow, Babel)
- Led team-wide code quality initiatives: systematic code review, standardized linting, Gitflow Workflow
- Participated in brand style guide development and front-end UI implementation based on design mockups
- Planned and authored Modern JavaScript Frameworks e-book with hundreds of daily downloads

Technical Engagement Engineer, Oct 2016 – Feb 2017

- Provided low-level technical support and strategic consultation to corporate customers using Wijmo JavaScript UI Framework
- Authored several technical blog posts with thousands of monthly user impressions
- Developed product demos using plain JavaScript, React, Angular, and Vue
- Bridged communication between Wijmo product team and developer community, including bug report and feature request logging

National Science Foundation REU Leadership Group

Design and Web Development Consultant, Jan 2016 – Feb 2018

- Designed and produced new brand assets and strategy in collaboration with group members
- Migrated existing copy to new website with updated branding, responsive layout, and analytics tracking
- Optimized content for search visibility and target audience, increasing session duration by 400% and decreasing bounce rate by 20% over three months
